AGENDA

Who
… wants access to the data?

Why
… would they want access to the data?
… should you care?

How
… can they get access to the data?
WHO WANTS ACCESS?

(Cyber) Criminals
WHO WANTS ACCESS?

EVERYTHING IS A TARGET.
YOUR HEALTH DATA IS NEXT
WHO WANTS ACCESS?

EVERYTHING IS A TARGET.
YOUR HEALTH DATA IS NEXT

Multi Billion Dollar Companies
WHY WOULD THEY WANT ACCESS?

- Fitness Trackers may be the next big thing with millions of users
- None or weak security concepts
- Lots of interesting and sensitive data

Measure of base size, 000s

Forecast unit sales of health and fitness trackers worldwide from 2014 to 2015 (in millions), by region

Source: Fitbit filings, Jackdaw Research

Source: GFK © Statista 2015

Additional Information: Worldwide 2014 to 2015
WHY WOULD THEY WANT ACCESS?

- What kind of data is there anyway?
  - X-axis accelerometer
  - Pedometer
  - Activity Tracker (Walking, Running, Biking, Driving)
  - Sleep Tracker
  - Heart Rate/Pulse
  - Oxygen
  - GPS
  - Skin Temperature
  - Galvanic Skin Response
  - Stress Level
  - Notifications from the Smartphone
WHY WOULD THEY WANT ACCESS?

- Merkel mahnt, es mit dem Datenschutz nicht zu übertreiben (Don‘t overdo data privacy) [http://heise.de/-2812931](http://heise.de/-2812931)

- German Chancellor Angela Merkel: „Daten sind der Rohstoff der Zukunft“ (Data: The Resource of the Future)
WHY WOULD THEY WANT ACCESS?

- Personal Data is worth a lot of money

WHY WOULD THEY WANT ACCESS?

- **Insurance Companies provide Discounts**
  - Vitality (Insurance Company, UK): „The healthier you get, the more we're able to offer you. It's a virtuous circle that's good for you, good for us, and good for society.“

- **German Insurance Companies will pay subsidies:**
  - „Nach der AOK Nordost hat inzwischen auch die Techniker Krankenkasse Wearables und Fitnesstracker offiziell in ihr Bonusprogramm aufgenommen – darunter auch die Apple Watch.“ [http://heise.de/-2817046](http://heise.de/-2817046)
  - They claim they are not interested in the data (yet)

- **Users** may want to **manipulate** the data for better discounts

- **Attackers** may **hold the data to ransom** and threaten the user with loss of their discounted rates
WHY WOULD THEY WANT ACCESS?

- **Tracking of users** becomes even easier
  - “Security Expert Warns of Criminals Using Facebook to Plan Home Burglaries”
  - You don’t even need to actively post, attackers will read the GPS of your fitness tracker
  - „Health-Schufa“ (consumer reporting agency) may prevent you from getting the job, the bank loan or the wife you wanted

- **“Wearable tech will transform sport – but will it also *ruin athletes' personal lives*?”**
  - “Wearable technologies and big-data analytics are enabling coaches, trainers and general managers to analyze previously unquantifiable aspects of athletic performance in fine detail. But as more technology gets strapped on to professional athletes, some are beginning to express concern over how such devices could be used to track their diet, sleep patterns and life off the field.”
  - By faking data you could manipulate careers or even destroy them
WHY WOULD THEY WANT ACCESS?

- University of Illinois: Using a **homegrown app** on a Samsung Gear Live smartwatch, the researchers were able to **guess what a user was typing** through data "leaks" produced by the watches' motion sensors. [https://www.ece.illinois.edu/newsroom/article/11762](https://www.ece.illinois.edu/newsroom/article/11762)
  - Researchers were essentially able to **guess passwords**
  - **Android malware** is on the rise. It could simply implement this as well
HOW CAN THEY GET ACCESS?

- **AV-TEST evaluated** the security of 9 popular fitness trackers, results are available at

- **Majority of devices had security issues** that allowed unauthorized local or remote access to the data or even the manipulation of data

- Security issues were reported to several vendors
  - Fitbit is going to release a firmware update fixing two critical security issues after working on this with us for the last few weeks
  - Others didn't reply at all and devices are still vulnerable
HOW CAN THEY GET ACCESS? (Example 1)

- **Live-Data**, provides Fitness Data without authentication
- Notifications can be enabled to share the data in (near) real time
- In the upcoming fix the data will be encrypted

```java
// ... Initialize Bluetooth LE scanning via standard Bluetooth LE protocol
// ... Establish connection to "Charge" via standard Bluetooth LE protocol
// ... Discover services running on tracker via standard Bluetooth LE protocol

public void onServicesDiscovered(BluetoothGatt gatt, int status) {
    //Fitness data service; UUID from service discovery
    BluetoothGattService service = gatt.getService(UUID.fromString("558dfa00-4fa8-4105-9f02-4eaa93e62980"));

    //Enable notifications to retrieve fitness data whenever it has changed;
    BluetoothGattCharacteristic serviceCharacteristic = service.getCharacteristic(UUID.fromString("558dfa01-4fa8-4105-9f02-4eaa93e62980"));

    setCharacteristicNotification(gatt, serviceCharacteristic, true);
    // ... Be notified whenever updated fitness data is available

    public void onCharacteristicChanged(BluetoothGatt gatt, BluetoothGattCharacteristic characteristic) {
        //Fetch the data
        byte[] data = characteristic.getValue();
    }
```
HOW CAN THEY GET ACCESS? (Example 1)

- **Replay Attack** to manipulate data
  - Device Time and Alarm clock can be changed
  - Fitness Data can be erased
- The upcoming fix will prevent this attack

UNIX Epoch → Tracker Systemtime

UNIX Epoch → Alarm Clock time

Welcome Text
"STEPGEEK HI THERE HOWDY"

Device Time and Alarm clock can be changed
Fitness Data can be erased
The upcoming fix will prevent this attack

Everywhere is a target.
Your health data is next.
HOW CAN THEY GET ACCESS? (Example 2)

- Rebranded and distributed by several vendors (e.g. Acer)
- Pairing
  - Requires a PIN
  - 4-digit Hex-Code
  - Problem: „Code“ can be extracted from the device name
- Manipulation
  - Original App uses a library to communicate with the tracker, this library can be (ab)used by anyone, no obfuscation, no other security measures
  - It was possible to write a fake App that has full access to the tracker and is able to manipulate the data
HOW CAN THEY GET ACCESS? (Example 3)

- Bluetooth Connectivity
  - **Paring should (!) require hardware access** (by pressing a button on the tracker)
  - **Pairing and Connecting** was possible anyway (no matter if original or fake App, known or unknown Smartphone)

- Authentication
  - Original-App checks **Characteristics** to verify **authenticity of the device**
    - Serial-Number of **00002a25-0000-1000-8000-00805f9b34fb**
    - Software-Version of **00002a26-0000-1000-8000-00805f9b34fb**
    - Type-Description of **00002a27-0000-1000-8000-00805f9b34fb**
    - Hardware-Version of **00002a28-0000-1000-8000-00805f9b34fb**
    - Company Name of **00002a29-0000-1000-8000-00805f9b34fb**
  - Tracker doesn’t perform any checks of **Smartphone** or **App → Anyone can connect**
  - After successful connection (and without authentication) **data could be manipulated**
HOW CAN THEY GET ACCESS?

- Why is that so?
  - Vendors don’t think about security at all. One reply we got from a vendor: „Why would anyone hack a fitness tracker?“
  - Vendors have no experience or knowledge in the IT Security field
    - Even if they try to implement security, they fail
    - Old mistakes are repeated over and over again:
      - No authentication, broken authentication implementation
      - No encryption, bad encryption implementation
      - Mistakes we have seen 10 or 15 years ago in the traditional IT
  - Tight deadlines, market demands, features always come first
    - Fixing security after something happened is always more work and more expensive
Final Remarks

- Should **users** completely **abandon these devices**?
  - No, but they should be aware that a lot of devices will give away more information than they expect.
  - There are a few devices that have a robust security implementation.
  - Right now there are no known real-world attacks to fitness trackers. The possibility is there, but attacks will only be carried out on a larger scale when someone gains benefit from this.

- Should **insurance companies** really give **discounts based on fitness tracker** data?
  - Talk to us, we will tell you which device you can trust.

- There is much more to come. Criminals (and companies) are way more creative and better in finding ways to monetarize this data.

- Even legitimate ways to get (more or less) unauthorized access to your data are imaginable (**The resource of the future!**)
Thank you very much for your attention!
